

# SAY NO TO USE OF CHLORINE IN WATER PURIFIERS

Some of the storage water purifiers in the market today use unregistered chemicals for purification. As per international bodies like WHO and EPA, these unregistered chemicals may cause serious harm to our health.\*

As a consumer, it is your right to know the following:

- What types of chemicals are being used for purification?
- Are these chemicals safe for storage water purifiers to be used at home?
- Do these chemicals adhere to world regulations and standards for storage water purification at point of use (POU)?

So when buying a water purifier for your family, ask these questions.

**Storage water purifiers should be free from unregistered chemicals**
